

OCLC CONTENTdm Hosting Services

Hosting services are available to CONTENTdm libraries/organizations that purchase a license but don't have the dedicated personnel or infrastructure needed to run CONTENTdm on their own local servers. The OCLC CONTENTdm Hosting Services provide cost-effective solutions and technical support to get your collections online quickly and easily.

What hosting services are available for CONTENTdm libraries/organizations?

We can install and configure your initial CONTENTdm site on our servers. OCLC CONTENTdm staff provides the initial set up of your CONTENTdm instance with 5 GB of disk storage.

Additional storage can be purchased in 10 GB increments as your site grows, so you're not locked in to investments in hardware or disk space you don't need. Your CONTENTdm collections are accessible through your Web browser for collection creation, administration, and searching.

Your own instance of CONTENTdm includes:

- The ability to customize your CONTENTdm Web interface
- Upgrades to new releases of CONTENTdm
- Full support from OCLC CONTENTdm staff, the developers of CONTENTdm
- Incremental daily and full weekly backups of your hosted data and site
- Server and network uptime monitoring
- 100 Mbps port on the OCLC Seattle switch for rapid data transfer
- 25 GB of data transfer per month (this includes FTP uploads and data transferred to visitors and is more than adequate for most sites)

Can OCLC CONTENTdm provide consulting on Web site development and user account administration?

Yes, optional services are available through OCLC CONTENTdm staff at additional costs.

Where are the OCLC CONTENTdm hosted servers located?

The OCLC Seattle CONTENTdm servers are housed locally in Seattle with Digital Forest, a trusted name in the database and application hosting business.
